## BELGIAN BEACON

The city of Knokke-Heist in Belgium has undertaken an extensive redevelopment project in its Maes Boereboomplein neighbourhood. Working alongside architects Jakob & Macfarlane and landscape designers Sempervirens, French lighting design agency les éclaireurs has produced a scheme for the main lighting. The architecture and the adjacent public spaces are to be illuminated in a simple and efficient manner. From the ground to the façades, the design is centred around the perspective of the building at night.

The community building will itself be treated as a nighttime signal, with multiple colours that reflect the diversity of its uses, including: residential, performance hall, police station, library, restaurant and more. The integrated LEDs have been designed so that they don't impose on the façades during the day and give a complete and balanced reading of the building volume. Additionally, les éclaireurs' scheme includes the interior lighting and the balconies, adding to the comfort of the inhabitants. [www.leseclaireurs.net](http://www.leseclaireurs.net)
