

les éclairéurs

light poles inspired by architectural curves

Designing of specific light poles for the square next to the hall "Le Phare". The cylindrico-conical poles with double curve are made of hot dipped galvanized steel and finished with polyester powder coating; they match the curved design of the building's façades. Color changing spotlights are mounted on 18m high poles and enliven the square by their vivid shades during cultural and sports events at "Le Phare".

"le phare" hall seating 6000 in Chambéry, France
