

## The banks of the Saône found a new space use

(Chalon-sur-Saône, France)

From the southern entrance of the city to the Bastion Ste Marie, this arrangement offers to the historic center and its periphery, to back in touch with the Saone. The route is marked by a succession of squares and gardens with elaborated lighting scenes. The path of the docks, with his towering plane trees, creates a large pedestrian and cycles traffic that the lighting project

unifies in the same soft light. At the heart of the old center , the Niepce square welcomes river tourism by four majestic needle masts. The light strategy comes in links, city entries, polarities, gazebos, wild spaces, facades according to a truly sustainable and coherent lighting masterplan.
