

Transformation of the Place Jean Jaurès (Marseille, France)

The project proposes a conversion of the square to offer a multitude of uses, for which les éclaireurs, in collaboration with agence aps landscape designer, have created different lighting moods. A soft veil of warm white light for discreet, functional illumination along the ambulatory,

a tint of bluish light for strong illumination in the heart of Marseille, warm white grazing light for the «urban deck» and projected lighting for the magnolia passageway. The lighting can be adapted to suit events and the time of day.
