

## An eco-friendly Park & Ride

(Lyon, France)

Illumination of an underground 450-space parking lot for public transport users in Lyon who want to get to the city centre from the East of the agglomeration. The space is illuminated by fixtures slid into a streamline designed cable tray. The vehicle ramp is highlighted while the pedestrian access is accompanied by a large fault recreated with artificial light. Motion sensors and dimming allow for eco-responsible project, with a scenographic atmosphere.
