A new generation shopping centre

(Saint-Etienne, France)

For APSYS group, alongside SUD Architects and the Landscape designer BASE, we design the lighting for the new «Steel» shopping centre with its spectacular architecture. At the heart of the project is an extruded aluminium mesh that makes up the facade cladding and roofs. It's this materiality that we reveal. The lighting scenography of the site prioritizes the spaces to

emphasize the shopping loop and experience: kiosks, lighting installations, playgrounds, public spaces...
